

HVAC Protection System Commercial Buildings

The AeriGuard™ HVAC Protection System

is the first comprehensive program to protect commercial building HVAC assets against mould, bacterial and fungal contamination.

The problem

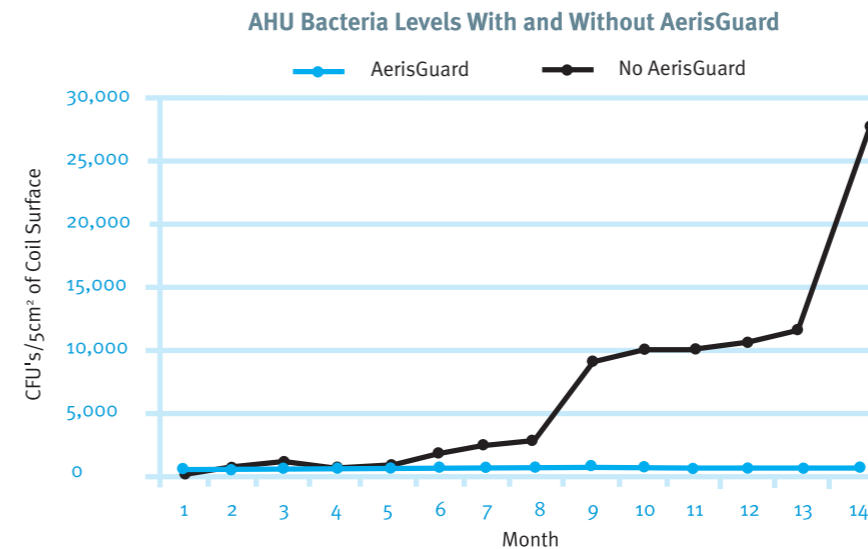

- Air conditioning in commercial buildings is a distributor of biological contamination as 80-90% of all commercial building air is re-circulated.
- This contamination affects the Indoor Air Quality and may result in staff health issues such as asthma and other immunological responses.
- These contaminants, when attached to the HVAC heat exchangers, decrease operational efficiency and airflow.

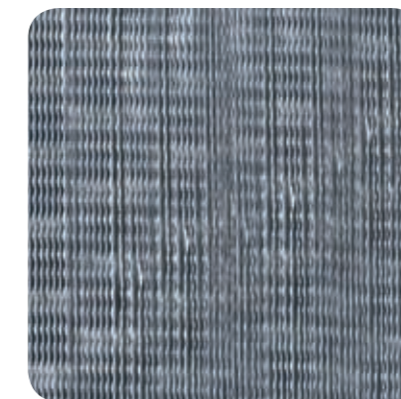

The solution

Treat the source! The AeriGuard HVAC Protection System cleans and removes all contamination from HVAC Components PLUS provides residual protection from further contamination for 12 months.

The proof

Coil before AeriGuard treatment.

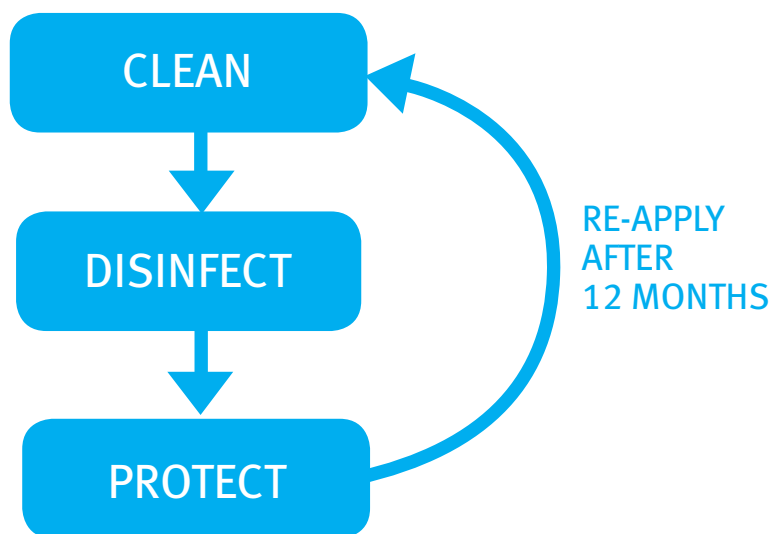

Coil after AeriGuard treatment.

- Increased energy efficiency
- Improved Indoor Air Quality
- Prolonged life of mechanical equipment
- Increased airflow
- Increased productivity

AeriGuard hygiene solutions

The process

AERISGUARD WARRANTY*

Aeris Technologies warrants to the Aeris Accredited Applicator that the indoor air conditioner coil(s) and internal AHU and duct surfaces, excluding subsurface areas of perforated/porous duct linings, cleaned and treated with the AeriGuard™ products will remain free of continuous microbiological growth indicated in microbial testing to less than 1000 CFU/CM², for a period of 12 months from the application date where the AeriGuard products have been applied.

12
MONTH
WARRANTY
LESS THAN
1000 CFU/CM²

* For a copy of the full warranty please request, "AeriGuard Limited Liability Warranty, Product Warranty Extended to Accredited Applicator Network"
